Overview

This document contains the minimum client hardware requirements, server recommendations and Terminal Server minimum hardware requirements supported by the Microsoft Dynamics GP Technical Support Team. The following server recommendations are not minimum server requirements. The requirements and recommendations are based on experience with many different installations. Users may need to increase these requirements due to environmental factors to achieve individual performance expectations.

Review each Customer Profile below to determine what profile best fits the user count, modules used and transaction volume for your environment. Use that Customer Profile as a recommendation for your server hardware implementation.

*****The System Requirements are subject to change until the release of Microsoft Dynamics GP 2016*****

NOTES

1. The following are no longer supported with Microsoft Dynamics GP 2016:

a. Microsoft Office 2010 32bit & x64

2. A 32-bit ODBC DSN is required for Microsoft Dynamics GP 2016 on a 32-bit and x64 machine. Refer to [KnowledgeBase Article 870416](#) for the steps to setup a 32-bit ODBC DSN on an x64 machine.

3. When you deploy a system in a virtual environment, make sure that you have sufficient hard disk space to avoid performance problems. Each computer that you deploy in a virtual environment should meet or exceed the random access memory (RAM) requirements and the hard disk space requirements. NOTES

1. The following are no longer supported with Microsoft Dynamics GP 2016:
 - a. Microsoft Office 2010 32bit & x64
2. It is recommended to have a dedicated Terminal Server/Citrix Server. There may be performance losses if Microsoft SQL Server is running on the Terminal Server/Citrix Server. Therefore, it is highly recommended to have two separate servers. One server with Terminal Server and/or Citrix and one server with Microsoft SQL Server.

3. If using Adobe, Adobe must be installed at the Terminal Server.
4. If using Lync for Unified Communications, a remote app for Lync must also be configured and copied to the client along with the Microsoft Dynamics GP remote app. The Lync remote app must be launched first and then the Microsoft Dynamics GP remote app.
5. If accessing Citrix, the hardware and software must be supported according to the Citrix configuration requirements.
6. Verify processors can be upgraded.
7. The amount of RAM needed depends on the number of concurrent users per Terminal Server.
8. Verify switch is capable of handling network traffic.
9. Increased user count may require greater RAM and Processor speed.
10. Users utilizing Management Reporter or Crystal reporting via Terminal Services may require increased hardware to increase performance.
11. When you deploy a system in a virtual environment, make sure that you have sufficient hard disk space to avoid performance problems. Each computer that you deploy in a virtual environment should meet or exceed the random access memory (RAM) requirements and the hard disk space requirements.
